

## About

This document describes the format data should adhere by, when supplying PDF or other files for output via print, e-mail or Digital Post.

## Description

The supported file format for files supplied for output is primarily PDF with all resources included, unless otherwise agreed.

Additionally, if the files are meant for color printing, the supported color profile is CMYK. Documents are to be supplied by creating an XML file containing metadata about the PDF or other files, which should be processed by KMD.

## PDF creation requirements

- Files should have all resources embedded
- If files are for color printing these should be generated with a CMYK profile
- Areas – as specified in the section: “Image clear zone for printing” – on the pages for print should be kept clear due to KMD adding security related information here for enveloping etc.
- The receiver address shall be in an OCR readable font as specified by Post Nord
- If the sender address is placed in the envelope window, it needs to be crossed with two lines, unless it is written on one line

## XML file requirements

The XML file is the driver for processing of the PDF documents. Any PDF documents delivered but not described in the XML file will not be processed.

An XSD describes the exact rules to follow. The following is to give a high level description of the flow and processing possibilities the integration offers.

An XML file can describe one or more PDF files. The PDF files can either be delivered alongside the XML file(s), or inline in the XML file(s).

The interface supports delivery of one or more XML files.

Currently the standard supports four delivery channels

- Archive
- Digital Post
- Email
- Print

Documents are also deliverable to other channels by specific appointment.

For successful processing some information is mandatory, and will be detailed in the following.

---

Department	KIS Standard Solutions	Date	06.12.2016	Version	2.2.0
Author	Carsten Skov, CRS; Mariane Richter Jensen, MRI	Revised	08.02.2017	Pages	af 1

---

## Delivery requirements

XML and PDF or other files are delivered in a ZIP compatible compressed file via a secure channel such as SFTP, FTP via a VPN tunnel or a secure line.

## General information

In order for documents to be processed, information of general nature is required. Mandatory information is shown as solid boxes, optional information is shown as dotted boxes

In the schemas type description each element is shown with M (Mandatory) or O (Optional).

The sections for postal delivery, email and digital post are optional. This means they can be omitted from the structure. However at least one channel needs to be present for any one document.

## Information for postal delivery

In order to deliver documents for postal distribution, a certain level of information is needed and therefore mandatory.

## Information for email delivery

Email delivery is handled by the email delivery section. As the email service handles bounce back by printing the document, postal address data is mandatory.

## Information for Digital Post

This section handles information for delivering documents to digital post.

## Eboks Payment

Currently we have implemented eBoks payment into the structure 'Document/DigitalPost/EboksPayment', within the 'eboks' namespace. Beware Eboks Payment is currently specified as draft from Eboks. As such all implementations are currently to be agreed upon separately, and cannot be used generally.

## Optional functionality

It is possible to do consolidation of several documents, resulting in one output document. Consolidation is based upon a separate agreement, and done solely from a key supplied in data. Data should be delivered to KMD in good time before production, so the documents are present in the data processing platform in due time for consolidation.

At the same time it is possible to sort the consolidated documents, so they are presented in the output document in a certain order. Two levels of sorting are available, first the documents are sorted by level 1, and next all documents in the same level are sorted within the level.

Department	KIS Standard Solutions	Date	06.12.2016	Version	2.2.0
Author	Carsten Skov, CRS; Mariane Richter Jensen, MRI	Revised	08.02.2017	Pages	af 2

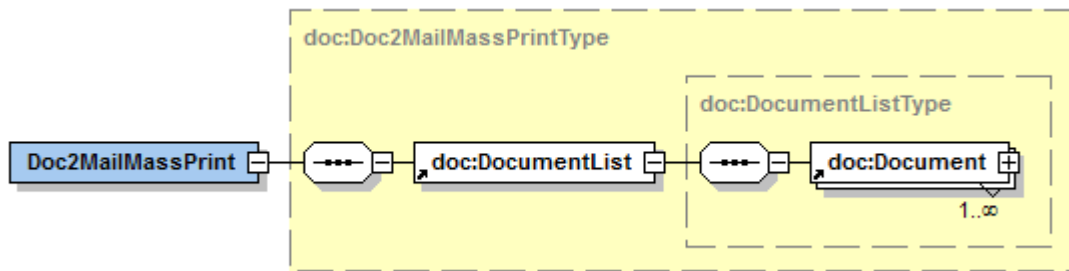

---

This presents the option to put i.e. all invoices and statements in the same envelope for a customer, and have the invoices be "on top" of the envelope, sorted by invoice number – then have the statements afterwards sorted by statement date.

Another scenario is to generate two or more parts of a document in different systems, and have them presented as one coherent document in the right order.

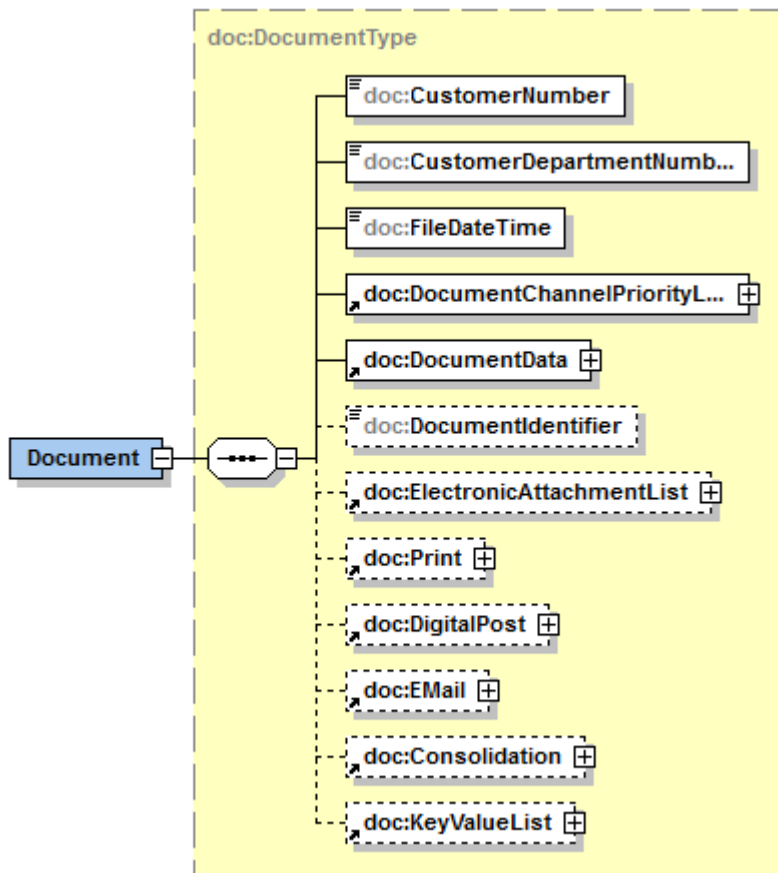

Consolidation has its own section and tags, which can be omitted entirely from the XML.

## Doc2MailMassPrint

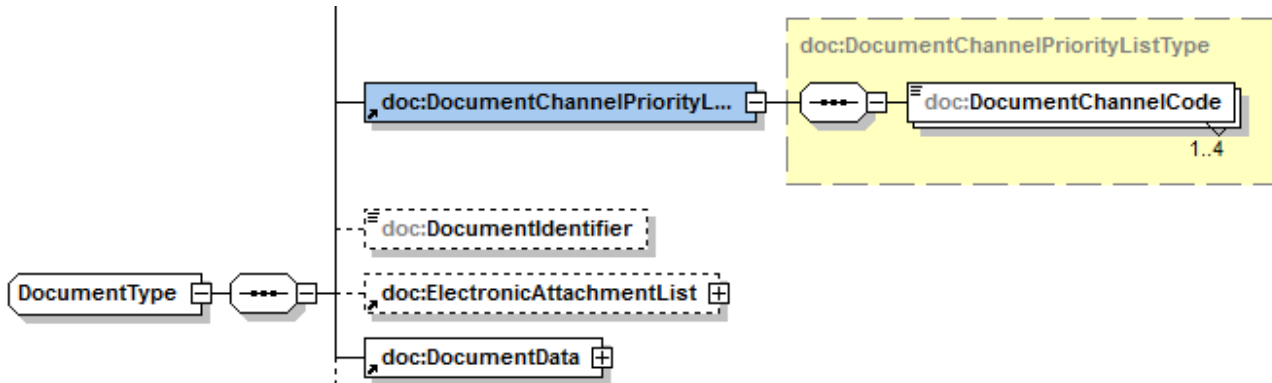

Type:	Data type+ format	Description
<b>Doc2MailMassPrintType</b>		
<b>doc:Doc2MailMassPrintType</b>		
DocumentList	DocumentListType	
<b>doc:DocumentListType</b>		
Document	DocumentType	

## DocumentType

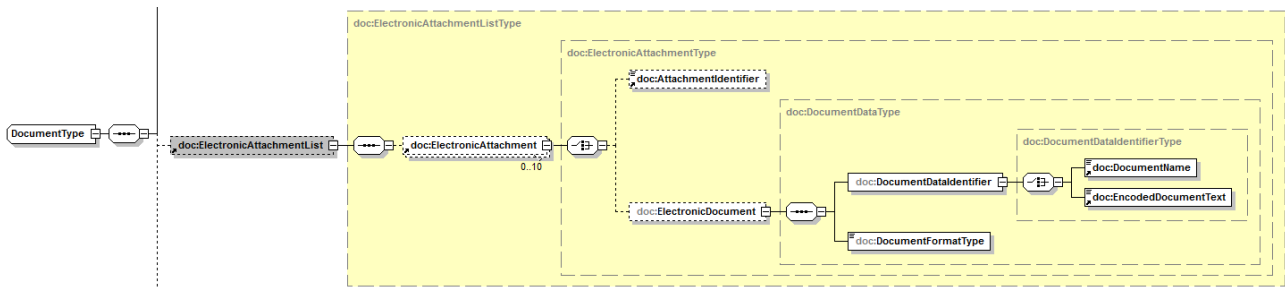

Type: DocumentType	Data type+ format	M / O	Description
<b>doc:DocumentType</b>			
CustomerNumber	integer(4)	M	Customer number at KMD
CustomerDepartmentNumber	Integer(4)	M	Sub customer number at KMD
FileDateTime	dateTime	M	Time the XML file was generated
DocumentChannelPriorityList	DocumentChannelPriorityListType	M	
DocumentData	DocumentDataType	M	
DocumentIdentifier	String (256)	O	Customers unique identifier for the document. Can be used to enquire processing details about a specific document
ElectronicAttachmentList	ElectronicAttachmentListType	O	
Print	PrintType	O	
DigitalPost	DigitalPostType	O	
Email	EmailType	O	
Consolidation	ConsolidationType	O	
KeyValueList	KeyValueListType	O	

## DocumentChannelPriorityListType

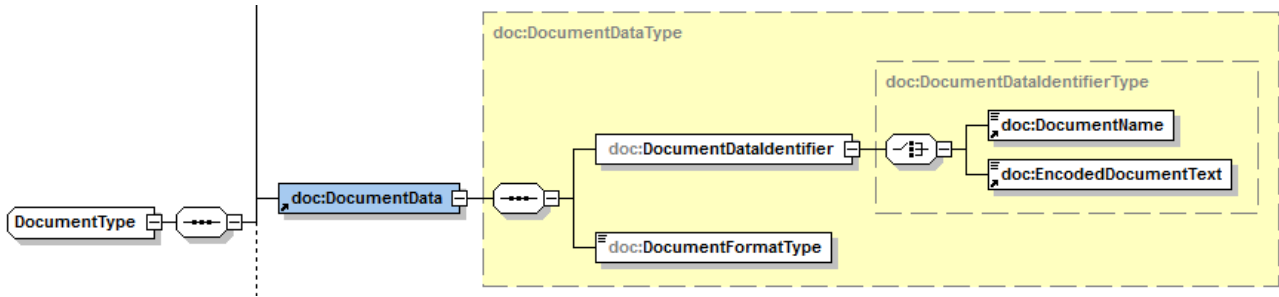

Type	Data type + format	M / O	Description
<b>DocumentChannelPriorityListType</b>			
<b>doc:DocumentChannelPriorityListType</b>			
DocumentChannelCode	Archive DigitalPost EMail Print	M	Priority of deliveries. In case of fallback to another channel, which channel should be tried first, then which channel the document should fallback to.

## ElectronicAttachmentListType

Type	Data type+ format	M / O	Description
<b>ElectronicAttachmentListType</b>			
<b>doc:ElectronicAttachmentListType</b>			
ElectronicAttachment	ElectronicAttachmentType	O	
<b>doc:ElectronicAttachmentType</b>			
AttachmentIdentifier	string (250)	O	Name of an attachment already placed in KMD's DIP attachment repository to be added to the document. This will expand the current document, with the content of the stored insert thus avoiding the content to be included in each document with the delivery.
ElectronicDocument	DocumentDataType	O	Electronic document by name or base64string. See <a href="#">DocumentDataType</a> description below

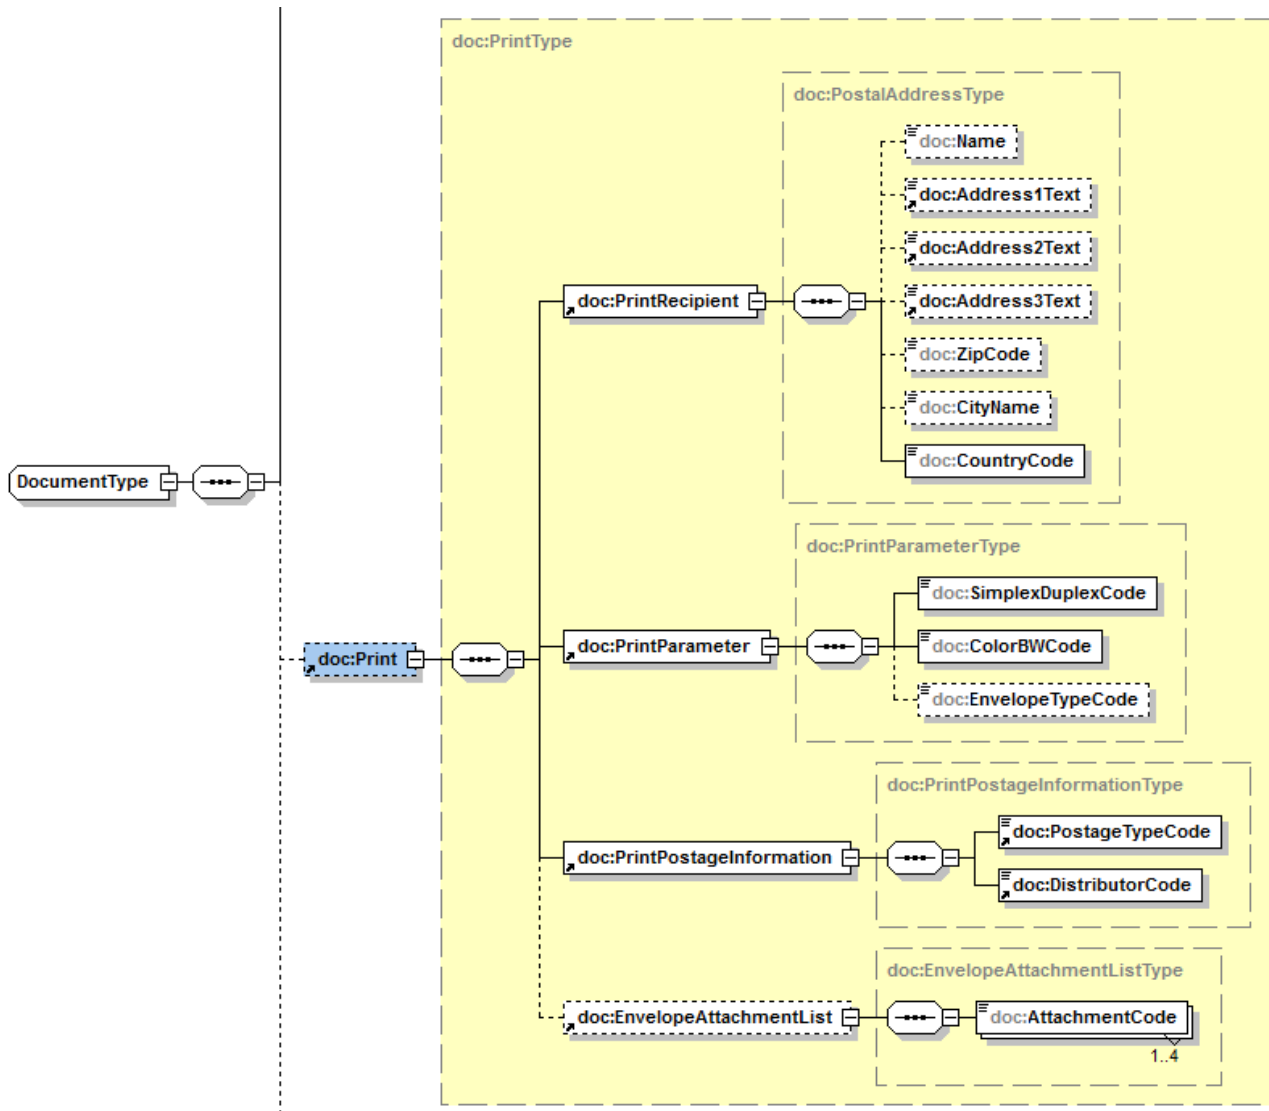

## DocumentDataType

Type DocumentDataType	Data type+ format	M / O	Description
<b>doc:DocumentDataType</b>			
DocumentDataIdentifier	DocumentDataIdentifierType	M	
DocumentFormatType	String (4)	M	File extension type. allowed types depends on selected channel codes. I.e. 'PDF' = PDF file
<b>doc:DocumentDataIdentifierType</b> (Choice between DocumentName and EncodedDocumentText)			
DocumentName	string (250)	O	Filename of the document as delivered in the compressed file
EncodedDocumentText	base64string	O	The document as a base64 encoded binary string

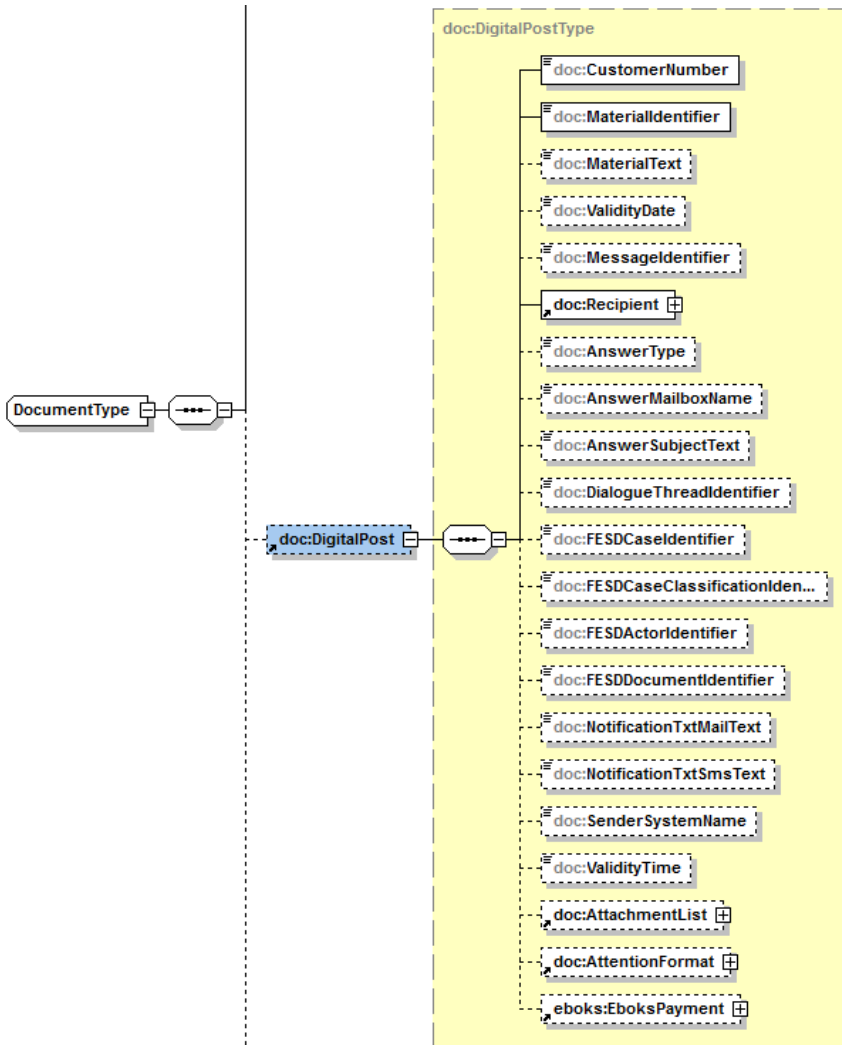

## PrintType

Type PrintType	Data type+ format	M / O	Description
<b>doc:PrintType</b>			
PrintRecipient	PostalAddressType	M	
PrintParameter	PrintParameterType	M	
PrintPostageInformation	PrintPostageInformationType	M	
EnvelopeAttachmentList	EnvelopeAttachmentListType	O	
<b>doc:PostalAddressType</b>			
Name	String (250)	O	First- and last name of the recipient or a firm name
Address1Text	String (250)	O	First address line of the recipient
Address2Text	String (250)	O	Second address line of the recipient
Address3Text	String (250)	O	Third address line of the recipient
ZipCode	String (50)	O	ZIP Code of the recipient
CityName	String (50)	O	City name of the recipient

Type PrintType	Data type+ format	M / O	Description
CountryCode	String (2)	M	ISO 3166-1 Alfa-2 Codes This is used to categorize the mail piece into delivery areas.
<b>doc:PrintParameterType</b>			
SimplexDuplexCode	Simplex Duplex	M	'Simplex' = print on one side only 'Duplex' = print on both sides of a sheet of paper
ColorBWCode	Color BlackWhite	M	Print the document(s) in color or black and white
EnvelopeTypeCode	C4 C5 C4S	O	Size of the envelope C4/C4S = 25 x 35,3cm C5 = 17 x 25cm Note: EnvelopeTypeCode can only be used by agreement with KMD otherwise, it will be ignored.
<b>doc:PrintPostageInformationType</b>			
PostageTypeCode	A B C D	M	Exact definition is agreed upon during implementation.
DistributorCode	PN BK	M	PN (Post Norden) BK (Bladkompagniet)
<b>doc:EnvelopeAttachmentListType</b>			
AttachmentCode	A B C D	M	Used to activate insert stations on the enveloping machine. Exact definition is agreed upon during implementation

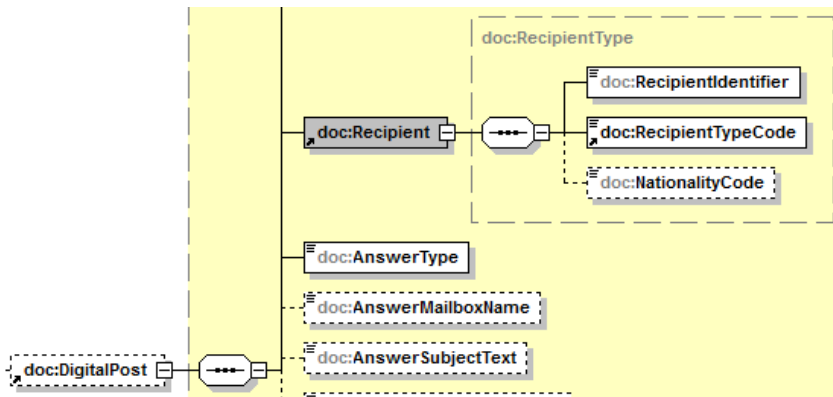

## DigitalPostType

Type: DigitalPostType	Data type+ format	M / O	Description
<b>doc: DigitalPostType</b>			
CustomerNumber	String (15)	M	Customer number with digital post
MaterialIdentifier	String (15)	M	The identification of the material in digital post
MaterialText	string (50)	O	Optional free text to be added
ValidityDate	dateTime	O	Date the document should be shown in digital post
MessageIdentifier	String (24)	O	Free text for own identification of documents. These will be reflected in error- and recipient lists.
Recipient	RecipientType	M	See <u>RecipientType</u> description below

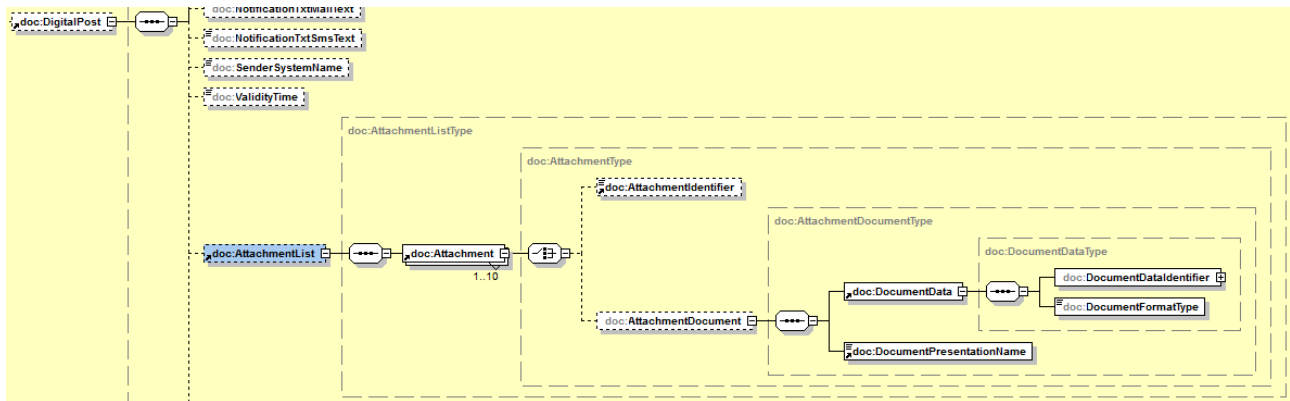

Type: DigitalPostType	Data type+ format	M / O	Description
AnswerType	string (1)	O	'D' = Answerable (use default answerMailbox) 'A' = Answerable (the answerMailbox given in the XML file) 'N' = unanswerable 'Empty' = unanswerable
AnswerMailboxName	string (15)	O	ID of the answer inbox as defined in the administration portal. Will be used if answerType is 'A'
AnswerSubjectText	string (15)	O	ID of the answer subject as given in the administration portal. Will be used if present and answerType is 'A'.
DialogueThreadIdentifier	string (26)	O	ID specified in case of an ongoing conversation with a citizen.
FESDCaseIdentifier	string (36)	O	Identification of the case
FESDCaseClassificationIdentifier	string (36)	O	Classification of the case
FESDActorIdentifier	string (36)	O	Identification of the actor
FESDDocumentIdentifier	string (36)	O	Identification of a specific document
NotificationTxtMailText	string (1024)	O	Text for individual notification by email.
NotificationTxtSmsText	string (1024)	O	Text for individual notification by SMS
SenderSystemName	string (15)	O	The identification of the sending system as specified in the administration portal
ValidityTime	String (8)	O	Time format: HH:MM:SS
AttachmentList	AttachmentListType	O	See <a href="#">AttachmentListType</a> description below
AttentionFormat	AttentionFormatType	O	See <a href="#">AttentionFormatType</a> description below

## RecipientType

Type RecipientType	Data type+ format	M / O	Description
<b>doc:RecipientType</b>			
RecipientIdentifier	String (50)	M	Identification of the receiver – CPR, CVR or ALIAS number
RecipientTypeCode	V P A	M	V=Recipient is a CVR number P=Recipient is a CPR number A=Recipient is an ALIAS number (translated into CPR/CVR by KMD)
NationalityCode	String(2)	O	ISO 3166-1 Alfa-2 Codes. Currently allowed 'DK', 'NO', 'SE' Default = 'DK'

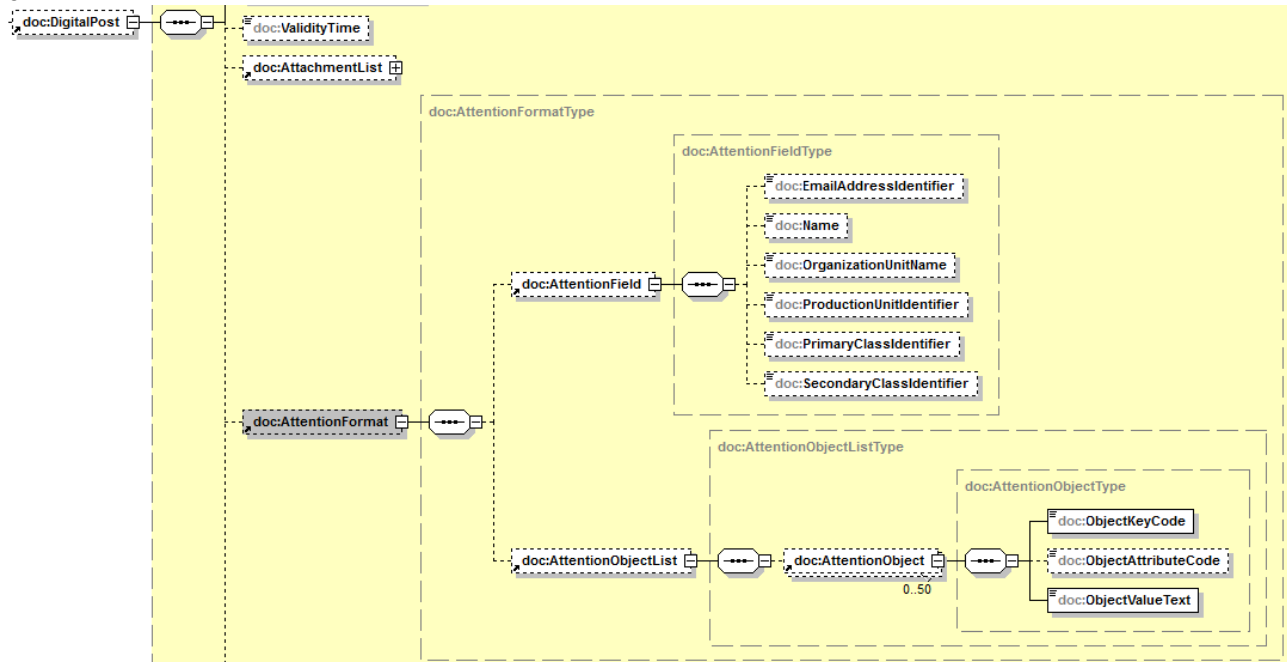

## AttachmentListType

Type AttachmentListType	Data type+ format	M / O	Description
<b>doc:AttachmentListType</b>			
Attachment	AttachmentType	M	An AttentionFormat or EboksPayment counts as one attachment in Digital Post AttachmentList.
<b>doc:AttachmentType</b>			
AttachmentIdentifier	String (8)	O	Enclosure identification is 8 characters, but the schema element allows 250 characters.
AttachmentDocument	AttachmentDocumentType	O	
<b>doc:AttachmentDocumentType</b>			
DocumentData	DocumentDataType	M	See <a href="#">DocumentDataType</a> description above
DocumentPresentationName	String (254)	M	Filename of the attachment without extension. Extension is stated in DocumentFormatType. Filename + extension is shown in the attachmentlist in Digital post

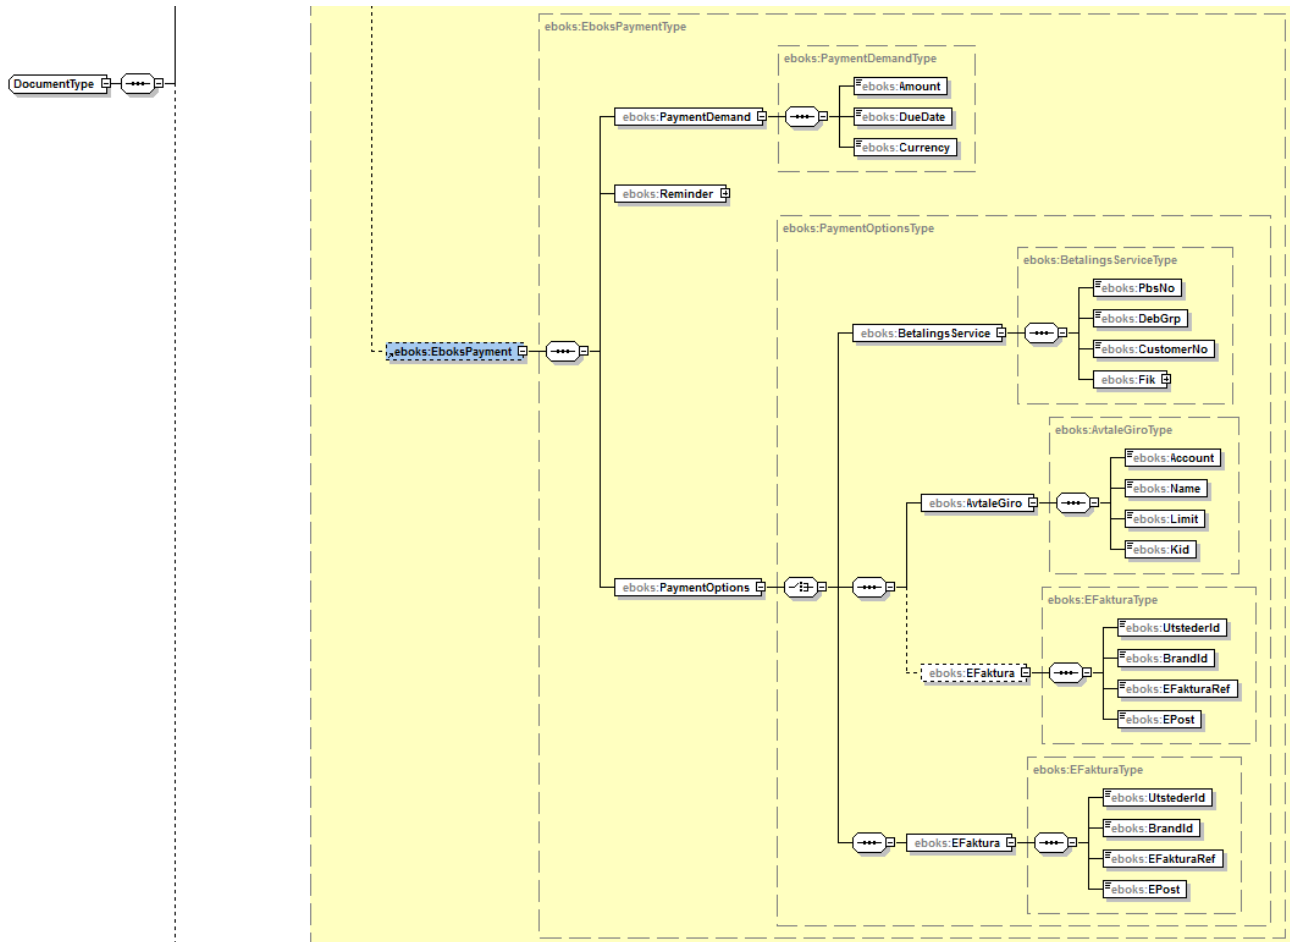

## AttentionFormatType

OR

Type AttentionFormatType	Data type+ format	M / O	Description
<b>doc:AttentionFormatType</b>			
			An AttentionFormat or EboksPayment counts as one attachment in Digital Post AttachmentList.
AttentionField	AttentionFieldType	O	
AttentionObjectList	AttentionObjectListType	O	
<b>doc:AttentionFieldType</b>			
EmailAddressIdentifier	String (255)	O	Email address
Name	string (130)	O	The full name of the receiver
OrganizationUnitName	string (50)	O	Name of the organizational unit
ProductionUnitIdentifier	string (10)	O	P-number – unique id of the production unit within the the company
PrimaryClassIdentifier	string (100)	O	Used for FORM-code as a user issued key (following the format xx.xx.xx.xx)
SecondaryClassIdentifier	string (100)	O	Used for other classificationcode, i.e. a KLE-number. Specified as a user issued key
<b>doc:AttentionObjectListType</b>			
AttentionObject	AttentionObjectType	O	
<b>doc: AttentionObjectType</b>			
ObjectKeyCode	string (50)	M	For specification of further identifiers, which can be used by the receiving agency inpuhandling and placement of the document
ObjectAttributeCode	string (50)	O	Attribute, which can be used for marking of the object in a business context
ObjectValueText	string (100)	M	Reference value of the object

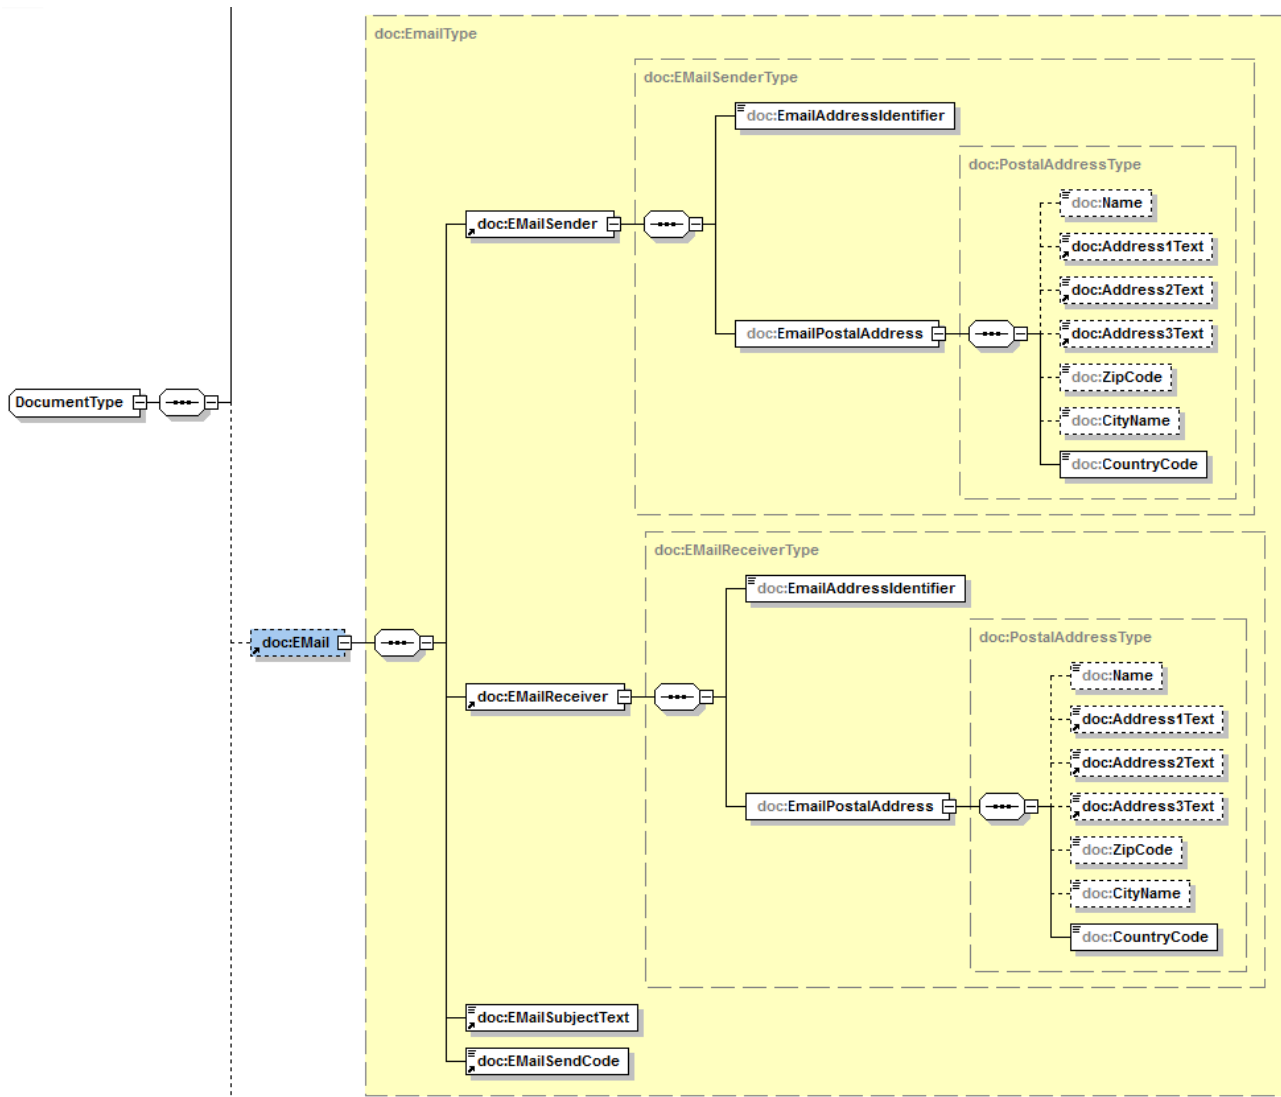

## EboksPayment

Type EboksPaymentType	Data type+ format	Description
doc:EBoksPaymentType - See Eboks Implementeringsguide_04-01-2017_v0.9_DK.pdf		

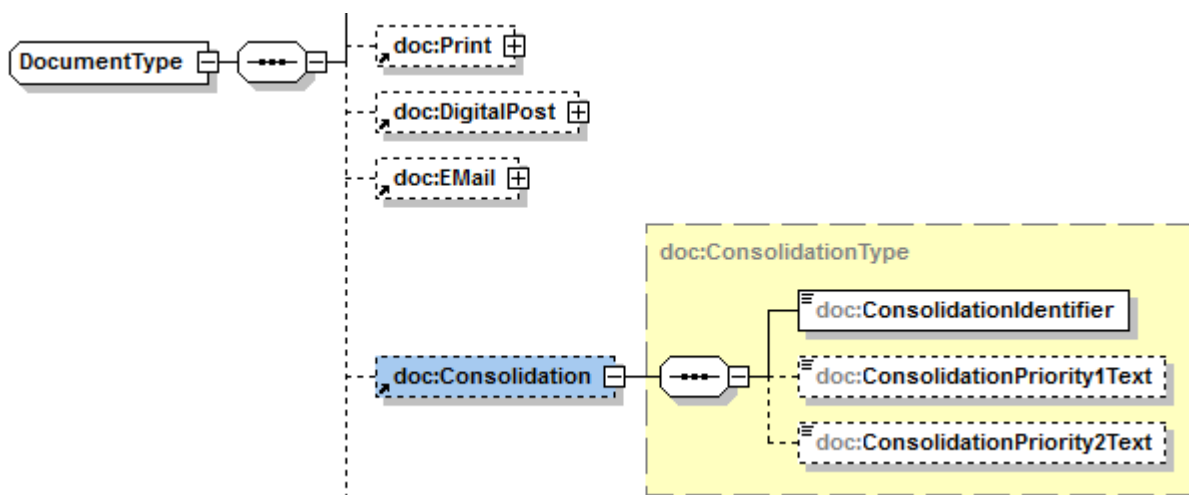

## EMailType

Type EMailType	Data type+ format	M / O	Description
<b>doc:EMailType</b>			
EMailSender	EMailSenderType	M	
EMailReceiver	EMailReceiverType	M	
EmailSubjectText	String (80)	M	The subject to be put in the subject of the email
EMailSendCode	integer (1->6)	M	Used depending on the way documents should be sent to the recipient. For specific usage this is agreed upon with KMD
<b>doc:EMailSenderType</b>			

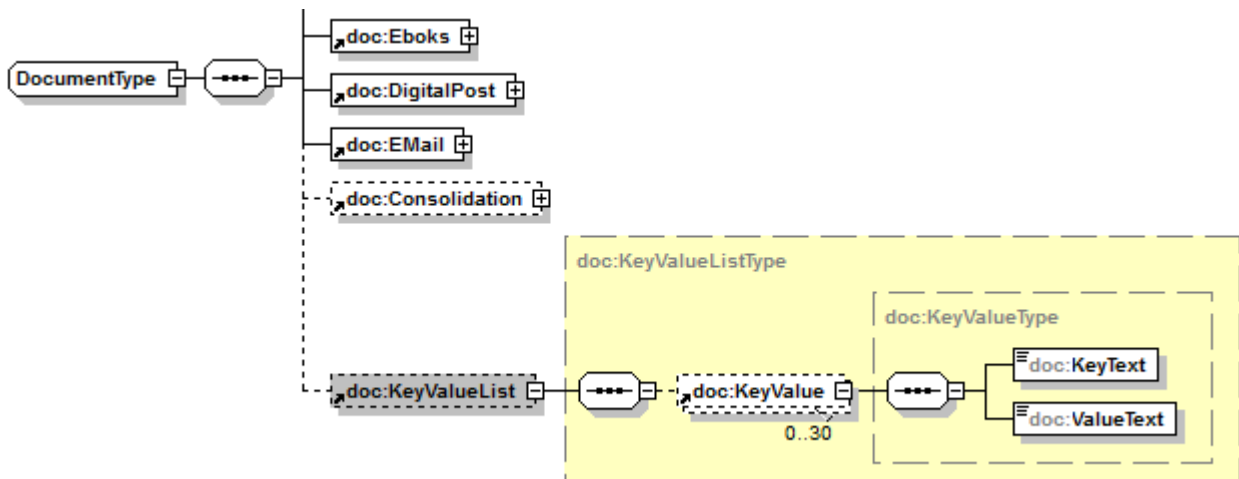

Type EMailType	Data type+ format	M / O	Description
EMailAddressIdentifier	String (256)	M	The email address used as the sender email address
EmailPostalAddress	PostalAddressType	M	Name as displayed as the sender of the email Senders address information for the Service Letter. Needs to be an address in Denmark See <a href="#">PostalAddressType</a> description above.
<b>doc:EMailReceiverType</b>			
EMailAddressIdentifier	String (256)	M	The email address for the recipient
EmailPostalAddress	PostalAddressType	M	Name which should be put in the To: part of the email address information for the optional Service Letter, which is added as first page if an email does not reach the receiver, or the link is not clicked within the agreed timeframe. See <a href="#">PostalAddressType</a> description above.

## ConsolidationType

Type	Format og feltlængde	M / O	Description
<b>doc:ConsolidationType</b>			
ConsolidationIdentifier	string (255)	M	An alphanumeric value which ties together documents in order for them to be output as one coherent document
ConsolidationPriority1Text	string (50)	O	Sort value level one
ConsolidationPriority2Text	string (50)	O	Sort value level two

## KeyValueListType

Type	Format og feltlængde	M / O	Description
<b>doc:KeyValueListType</b>			
KeyValue	KeyValueType	O	
<b>doc:KeyValueType</b>			
KeyText	String (50)	M	Alphanumeric values used for additional key / value pairs. Exact definition is agreed upon during implementation
ValueText	String (250)	M	

## Image clear zone for printing

### Doc2Mail Clearzone V3
